

## SYNTHETIC GRASS FOR PETS

Our products are meticulously designed to simulate the actual look, feel and performance of natural grass. Always green and lush, our synthetic grass is made of a special polyethylene blend of long-bladed, bent grass fibers which are designed to last a lifetime. Each blade maintains a real-life luster without fading in the sun, and unlike real grass, our products will never wilt and are always well-manicured.

### SYNTHETIC GRASS IS GREAT FOR:

- Homeowners with dog runs
- Owners of dogs with natural grass allergies
- Commercial dog breeders with exterior kennels
- Pet shelters
- Pet resorts/boarding facilities
- Veterinarians Clinics and Hospitals

### SOUTHWEST GREENS® PET SOLUTIONS: GOOD FOR BUSINESS

Synthetic grass is a phenomenal way for a pet-service company to set itself apart from the competition. You'll give current and future clients the confidence and peace of mind of knowing your business reflects the same care and attention to detail their pets will experience. With one step inside your state-of-the-art facilities, you'll make a strong impression on every visitor — whether they're two-legged or four-legged!

## WHY SHOULD I CHOOSE SOUTHWEST GREENS® FOR MY PET?

### /// *Safe for Pets and Kids*

Using synthetic grass avoids exposing pets and loved ones to the harmful fertilizers and chemicals often found applied to natural grass. Southwest Greens® synthetic grass can be designed for extra-soft landings, and the very nature of our products eliminates itching, sneezing and stains associated with real grass.

### /// *The Hygienic Choice*

Our turf backing system is made with perforated urethane to allow superior flow-through for pet urine. In addition, synthetic grass will not leave unsightly, yellow dead spots. A good rinsing from a garden hose eliminates bacteria and avoid odors from solid waste.

### /// *Ease of Maintenance*

Soft and natural yet extremely durable, synthetic grass is ideal for extreme climates and locations with heavy use. And with no watering and little care, you'll experience reduced costs over natural surfaces. Synthetic grass also drains as well as natural grass but without the mud. Most times removing debris only requires using a leaf blower!

### /// *Committed to Customer Satisfaction*

Southwest Greens® stands by its products and installation with exceptional customer service. We provide a five-year limited warranty on our products and a workmanship warranty that far exceeds the industry norm.

### /// *Experts in Installation*

Our experienced installers have mastered the art of synthetic grass installation and will work to find the right pet solution for you. We have the ability to install any grass on the market and can tailor the construction of your installation to best meet your specific needs.
